

FLORAL DIVERSITY OF NANDAN KANAN SANCTUARY AND ZOOLOGICAL PARK

Forest Department
Government of Orissa
2000

FLORAL DIVERSITY NANDANKANAN SANCTUARY AND ZOOLOGICAL PARK.

Nandankanan wildlife sanctuary notified in the year 1979, covering Jajhagarh and Krishnanagar DPFs, is a part of earstwhile Chandka forest. After the shifting of the state capital from Cuttack to Bhubaneswar and rapid expansion of the new capital City most of the forest growth of vegetation has vanished leaving only the Chandka-Dampada wildlife sanctuary and this patch of forest. This sanctuary, which was notified primary to give legal protection to the Zoological park, established on the 29th December, 1960, still retains the character of the forest of which it was a part. The meandering Kanjia lake and other waterbodies support number of species of aquatic vegetation. Besides, some plants from within the country and abroad have been introduced within the sanctuary both in the State Botanical Garden as well the Zoological Garden for asthetic planting, scientific studies, medicinal use and providing shade and fodder to Zoo animals and visitors. The average altitude of the sanctuary is 20M from the M.S.L. Besides the captive animals, the sanctuary has wild animals, such as cheetal, mouse deer, wildboar, monitor lizard, jackels python, cobra, peafowl, rhesus monkey, common langur etc.

This check list of plants has been prepared with the efforts of Dr. B. P. Choudhary, former professor, Department of Botany for the students of biological sciences, foresters and other visitors who are keen to know about the flora of this unique habitat, very close to Chandka-Dampada (WL) Sanctuary, formed as an elephant reserve.

As per the Champion and Seth classification of forest type it confirms to sami evergreen forest. The biogeographical location is Deccan Pexinsula within the biotic province eastern plateau (6c)
